What is your proudest achievement: (Limit to 100 words)

The original F/A-18 had a unique out-of-control mode where the airplane would settle in a motion that looked like a falling leaf. 20 aircraft were lost. After we developed the Super Hornet in the late 90s, we got smarter on controlling the aircraft and put my logic into the older aircraft that solved the falling leaf problem, also making it more maneuverable. Knock on wood, no jets have been lost since we since the new logic was added in 2003. I got awards from both the American Institute of Aeronautics and Astronautics, and Tailhook. Oh, and a hole in one.

Have you retired? What are you doing now:(Limit to 100 words)

Yep. Since 2022. I still do part time consulting for the Navy flight control guys, doing fun stuff that pays for the country club. I play quite a bit of golf, and you'd think an engineer would be able to figure out how to hit a 7 iron consistently. Nope.

Add anything else you would like to share with the class:

My wife was having a hard time keeping track of her golf shots. I invented an app for the Apple Watch that automatically detects/counts swings, and does some other stuff. Shameless plug to my app:
